

ARL Notice List Project

CS347 Final Presentation

Steven Ritchie, Andrew Nguyen

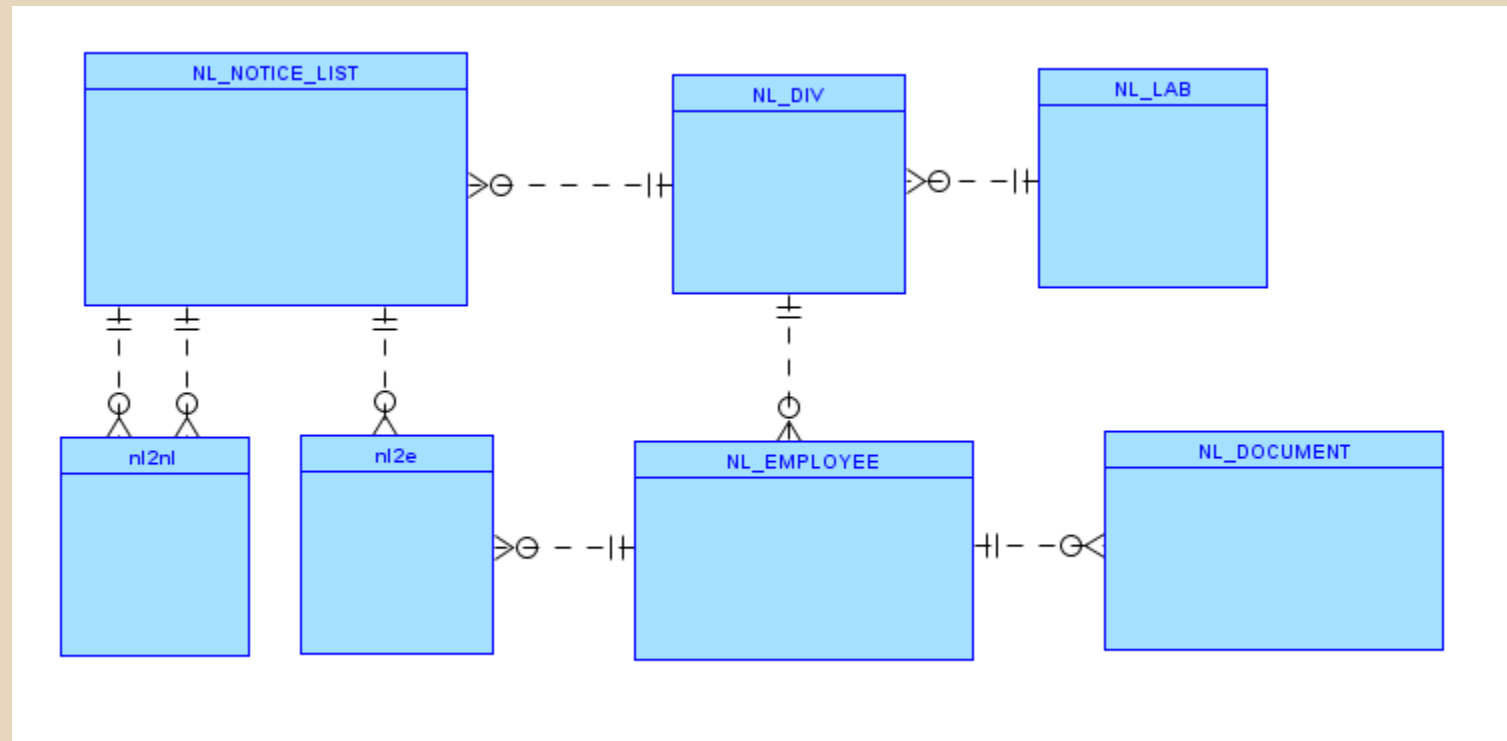

Conceptual Model

- NL_EMPLOYEE, NL_DIV, NL_LAB are read-only tables

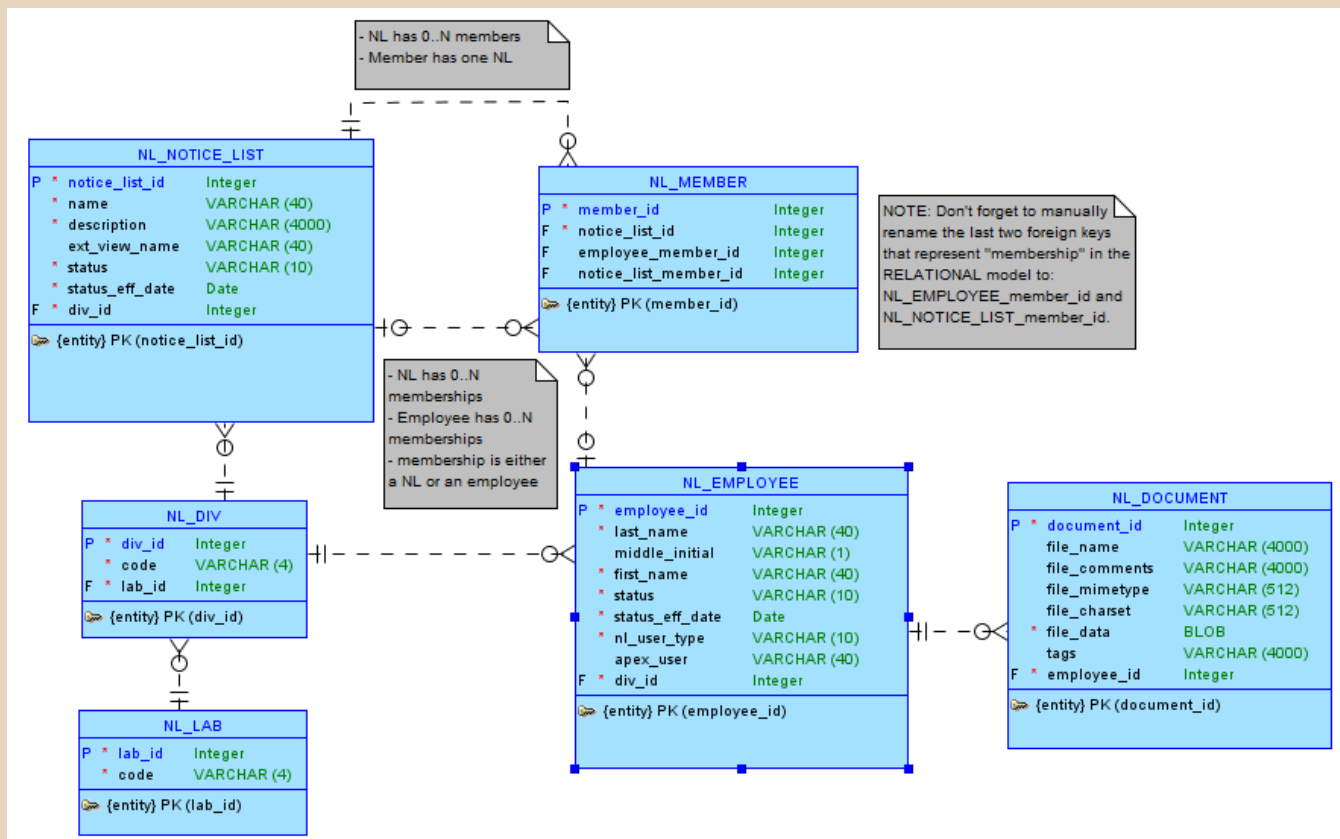

Logical Model (Intermediate)

- Convert the two M:N relationships into two junction tables

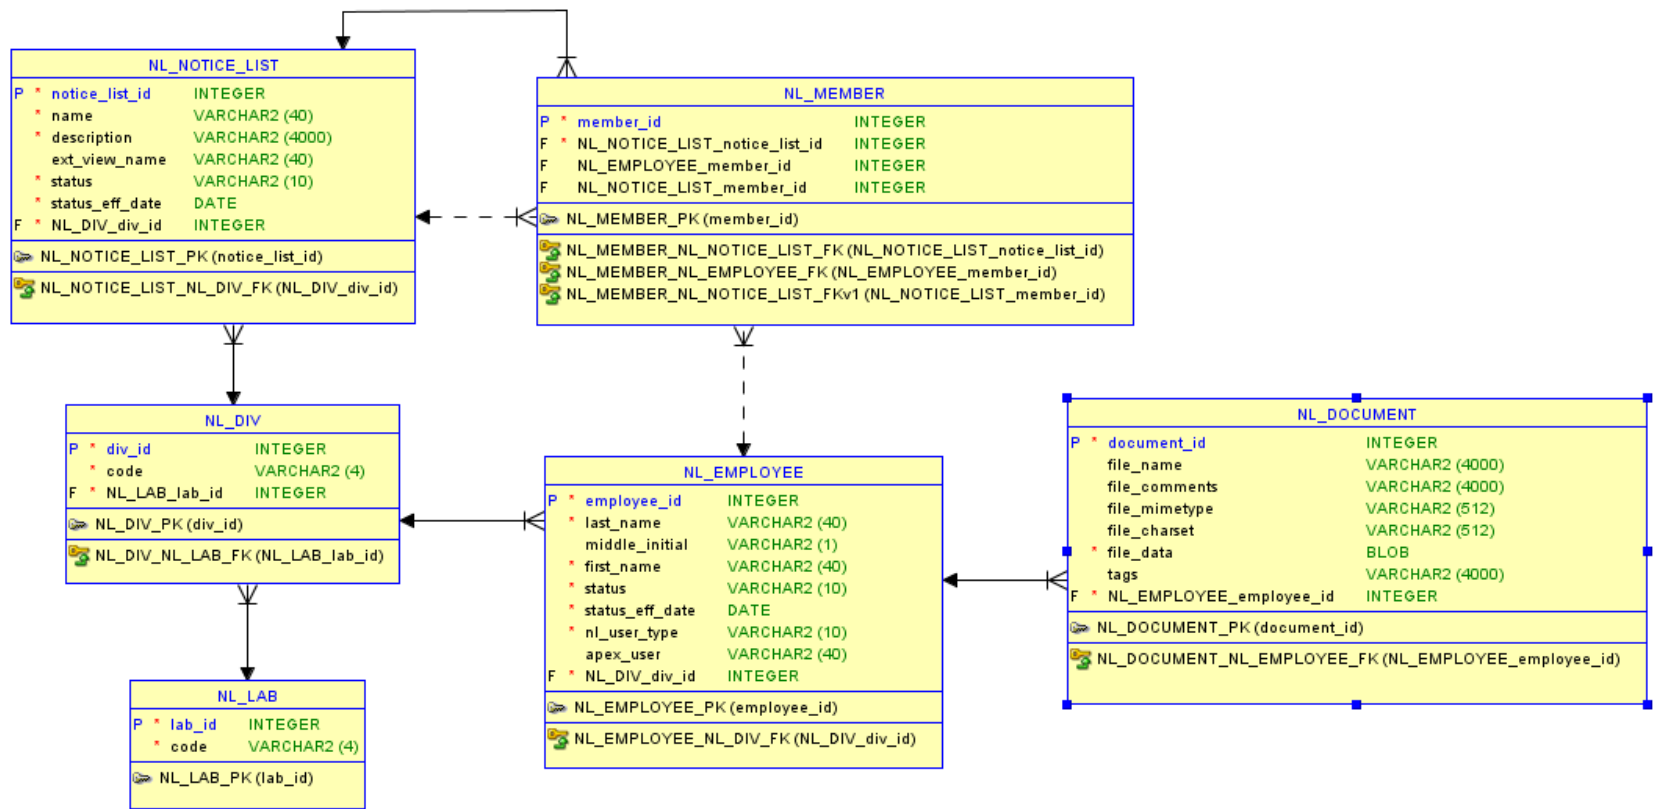

Logical Model (Final)

- To match the schema given by ARL, the NL_MEMBER junction table combines what was two junction tables (previous slide) into one table where EITHER employee_member_id OR notice_list_member_id is used.

Logical Model Relational

APEX Application

- URL
- ACCOUNTS
 - ADMIN
 - user: nladmin, pwd: nladmin
 - STANDARD
 - user: nlstandard, pwd: nlstandard
 - BASIC
 - user: nlbasic, pwd: nlbasic
 - NONE
 - user: nlnone, pwd: nlnone

Login Page

- Uses APEX authentication and links APEX users to NL_EMPLOYEES

✎	asdf	asdfsadf	-	ADS	ACC	ACTIVE	29-APR-15	29-APR-15
✎	ATL List	atl	-	ATL	ATL	ACTIVE	29-APR-15	29-APR-15
✎	ITS List 2	its	-	ITS	ITS	ACTIVE	29-APR-15	29-APR-15
✎	SGL List	sgl	-	SGL	SAT	ACTIVE	29-APR-15	29-APR-15

1 - 7

Members Tab

- Manage memberships
- Filter by last name
- Filter by list name
- ADMINS can control any list
- STANDARD users can only control lists in their lab
- Tree view of list membership
- Multiselect via shuttle controls

The screenshot displays the 'ARL Notice List Manager' application. The top navigation bar includes a 'Log Out' button. A sidebar on the left contains links for 'Home' and 'Developer'. The main content area is titled 'Membership' and features a welcome message for 'Elon Musk, lab ADS'. Below this, there are tabs for 'Notice Lists', 'Membership', 'User Actions', and 'Documents'. The 'Membership' tab is active, showing a 'Select Notice List' dropdown set to 'ADS List lab:ADS'. Below this are filters for 'Filter by Lab' and 'Filter by Employee Last Name'. The interface is divided into two main sections: 'Employee Members' and 'Notice List Members'. The 'Employee Members' section shows a list of employees with their status and lab, and a set of shuttle controls (arrows) to move them between lists. The 'Notice List Members' section shows a list of notice lists with their status and lab, and a set of shuttle controls. At the bottom, there is a 'Membership Tree' section showing a hierarchical view of the membership data.

Documents Tab

- ADMIN/STANDARD/BASIC users can upload documents associated to their NL_EMPLOYEE row

The screenshot displays the ARL Notice List Manager application. The left sidebar contains a menu with 'Home' and 'Developer' options. The main content area shows a welcome message for 'Elon Musk' and a navigation bar with 'Notice Lists', 'Membership', 'User Actions', and 'Documents' (the active tab). Below the navigation bar is a 'Documents' section with a search bar, 'Go' button, 'Actions' dropdown, and an 'Upload Document' button. A table lists documents, with one entry visible: 'stewie.jpg' with a 'family guy' label, a 'Download' link, 'image/jpeg' type, and a date of '28-APR-15'. The bottom right corner shows '1 - 1'.

1 - 1

Known Bugs

- MAJOR: Committing either of the shuttles clears the selection for the other shuttle. This appears to be an APEX issue as both of the submit processes are conditional on the specific button. Somehow during the commit, the page refresh is committing the other shuttles selection when it's in the intermediate step of just loading the full list of members (before the members are moved to the right side of the shuttle)
- MINOR: Cloning memberships doesn't filter out already existing memberships so you can get duplicate memberships

BACKUP SLIDES

Conceptual Model B

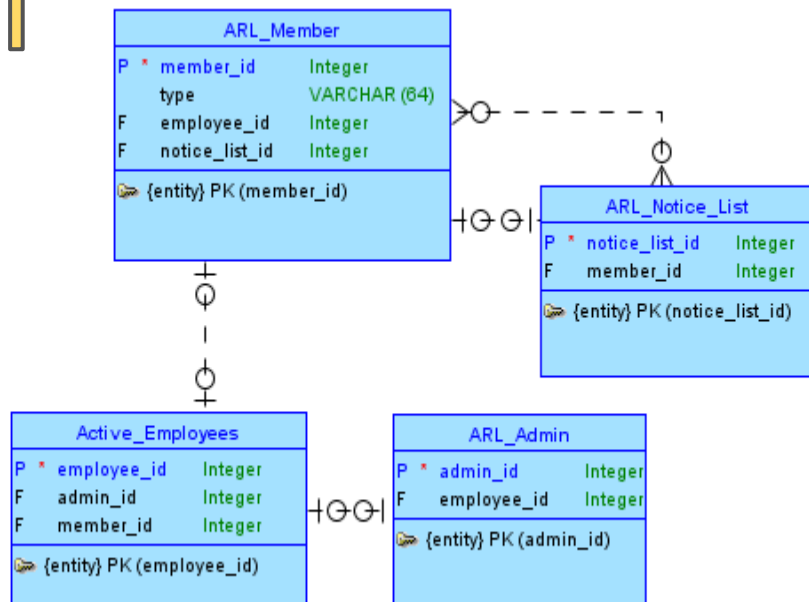

- Use inheritance to model “member” hierarchy
- Downside is it creates a new member table that is unnecessary and can be simplified down to the same thing as logical model A (explained in next slide)

Logical Model B

1. Collapse the member hierarchy
2. Add junction table for M:N relationship
3. Notice that ARL_Member can be coalesced into ARL_NL2M and **type** can be made implicit by using employee_id OR notice_list_id. This change brings us back to logical model A. (It doesn't seem like there are any downsides to doing this UNLESS we need to have views into the junction table to guarantee that the right id attribute is filled in.)
